EDUCATION

Brown University

Sept 2024 – May 2026

Master of Science in Electrical and Computer Engineering. GPA: 4.0/4.0

Providence, RI

- Harvard University Exchange Scholar: Startups from Idea to Exit
- Engineering Representative of Brown University Pre-Law Graduate Society

Soochow University

Sept 2020 – June 2024

Bachelor of Engineering in Measurement, Control Technology, and Instrumentation. GPA: 3.7/4.0

Suzhou, China

- Honors: MCM (Mathematical Contest in Modeling), Honorable Mention (2023)

EXPERIENCE

AI Engineer & Founder, RedlineAI | Demo | GitHub

Mar 2026 – Present | Providence, RI

- Built a LangGraph multi-agent contract-review system with Scanner, Critic, and Evaluator agents using OpenAI function calling
- Modeled contracts as a Neo4j knowledge graph linking clauses, definitions, and cross-references for risk reasoning
- Designed graph-backed retrieval tools for agent access to clause dependencies, reducing OpenAI API usage by ~75%
- Evaluated 25 CUAD contracts and improved scanner recall by 67% through trigger expansion and threshold tuning

AI Engineer, StoryFork AI | GitHub

Feb 2026 – Present | Providence, RI

- Developed an AI interactive novel platform using Gemini API for users to fork, and rewrite stories through IF-line choices
- Implemented a RAG context assembly pipeline with time and branch filters to retrieve valid narrative context
- Orchestrated real-time story generation with LangGraph, FastAPI, SSE streaming, retry guards, and LangSmith tracing

AI Team Leader, NASA SUIT Student Challenge | Demo | GitHub

Nov 2025 – Feb 2026 | Providence, RI

- Designed a multimodal EVA AI assistant for astronaut voice-command execution across telemetry and navigation workflows
- Deployed a local Whisper ASR pipeline with text normalization to map noisy speech into a constrained command space
- Integrated a local Llama agent router with deterministic guardrails and human-in-the-loop confirmation to reduce hallucination
- Led cross-functional development with UI/UX teams to ship MCP-assisted Figma-to-React interfaces

RESEARCH EXPERIENCE

Machine Learning Research Assistant, leelab.ai, Brown University | GitHub

June 2025 – Aug 2025 | Providence, RI

- Implemented an EEG-BCI classification pipeline processing 66 multi-session EEG recordings (8-channel, 2048Hz)
- Developed SVM model for rapid visual target detection, achieving 87% accuracy with nested cross-validation across 11 subjects

AI Research Assistant, Soochow University

Jan 2023 – Dec 2023 | Suzhou, China

- Designed a Transformer-based NLG training framework using discriminator feedback to fine-tune GPT-style generators
- Supported experiment validation across NLP benchmarks and co-authored result analysis, visualization, and manuscript sections

PROJECTS

Policy-Grounded IT Helpdesk Agent | Demo | GitHub

May 2026

- Built a policy-grounded IT helpdesk agent for request routing, policy retrieval, tool authorization, and auditable decisions
- Designed a LangGraph workflow with bounded LLM routing, deterministic guards, controlled tool execution and audit logs
- Implemented trust-tier policies for password resets, employee lookup, HR records, shared drive access, legal hold, and escalation
- Evaluated 37 policy scenarios with 37/37 pass rate, 0 sensitive-data leaks, and 0 unauthorized Red-tier tool calls

CityPulse Wallet, Global AI Hackathon | Demo | GitHub

Apr 2026

- Built a full-stack React/Express AI city-wallet app using OpenAI API to generate personalized local offers from merchant goals
- Engineered a real-time context pipeline that injects live city signals and merchant goals into structured LLM prompts
- Implemented a guardrail validation layer enforcing discount ceilings, time windows, and product scope before customer delivery

Multi-Agent Quantitative Trading System, EasyA x Stellar Hackathon | GitHub

Oct 2025

- Designed a LangChain multi-agent trading system with GPT-4o function calling for strategy, risk, and settlement workflows
- Built a contextual multi-armed bandit strategy selector that adaptively chooses trading strategies using market-state features
- Implemented Rust Soroban smart contracts for multi-agent authorization, trade history, and AI-triggered circuit breakers

PUBLICATIONS

- "EvoText: Enhancing NLG Models via Self-Escalation Learning for Up-to-Date Knowledge". Applied Sciences 2023
- "Effective Acoustic Parameters for Automatic Classification of Performed and Synthesized Music". EURASIP Journal 2023

SKILLS

- **Agentic AI & LLMs Systems:** LangChain, LangGraph, LangSmith, RAG, Agent Orchestration, FAISS, Neo4j, MCP
- **Programming & ML:** Python, C/C++, Rust, SQL, JavaScript, TypeScript, PyTorch, scikit-learn, pandas, NumPy
- **Tools & Frameworks:** FastAPI, REST APIs, Docker, Git, CI/CD, Streamlit, Linux, React, Next.js
- **Languages:** English (Fluent), Mandarin Chinese (Native), French (Elementary)
